..... [19:13] slm !info intel-smapi intel-smapi (source: intel-smapi): SMM/SMMTPM Interface for Intel CPUs. In component universe, is optional. Version 0.3.1-1 (yakkety), package size 26 kB, installed size 97 kB install that and reboot, you should see something in dmesg (it probably needs some updating, though) . EriC^^!!! wols:? nice nick btw didn't know you use irc via a gateway. you made me laugh :D i use all sorts of stuff my use-cases: mobile broadband, at work, irc, website browsing, email, and everything else that works and that isn't on a laptop i use the command line a lot too Sysi: i think we already know each other a bit as much as possible anyway, the printer thing has nothing to do with xfce the printer is your friend? yes, it's the intel driver that's not working, that's the reason for the missing device in the file manager xfce is the window manager, it's just a desktop manager do you have driver installed and found in repos? yeah, an usb with no drivers and a.deb i found it in ubuntu software center but it doesn't work actually i think it's not a udev issue can you change it to some other port? i think it's an issue with the intel smapi stuff 82157476af
