Instead of concatenating the shell script path, I'd suggest using something like this: `#!/bin/bash for file in *; do if [[$file!= *~*]]; then httpget --url $file fi done` The httpget script does not need to be executed, it just needs to be included. The httpget script needs to be added to your PATH. Update 1: The above code will probably do the trick. The problem is that we do not have to sanitize the URLs. Update 2: The above code should handle all the issues. The problem with the HTML code is that there is a URL in the HTML which is not in the HTML at all. The following code will copy the original HTML into a new file:
`#!/bin/bash URL 2d92ce491b`
