This could happen especially if you're burning your first CD for a wedding or any important event. - If this is the case you can always burn a "data CD" (or a "rom CD"). What is a "rom CD" exactly? It's a special CD that is completely filled with music. These CDs are popular especially among collectors or people who have a lot of music on their computer and they simply want to keep it in their "car CD player". You can find these "rom CDs" on the internet. Just search for "rom CD". These CDs are very cheap, but they offer you the same music quality as a regular CD. - The music quality is really great on these CDs, you can't find them for less than \$5 - \$10 for about 2 GB of music. - You can buy these CDs from eBay or Amazon. Just search for "rom CD". I can tell you from experience that the sellers are usually honest and fast to send. - On these CDs the music is stored as files (WAV files) instead of the WMA format. - Why does it work so well? - Because a WMA file is a compressed file. A compressed file is stored on your computer as a series of binary numbers. It takes less space on your hard drive but it is not very nice to listen to because it can be noisy. It's like a CD with a compressed file that gets read when you start playing it, and it does not get re-compressed during playback. - But WAV files are uncompressed, which means they are just plain old audio files. This means they are easy to
