The Supreme Court in Hungary, which for some time has been considered a model judicial system, has not seen in history similar decisions which concern direct corruption and bribery. Because of this decision the main corruption case, also against the Minister of Justice, was closed without a clear result. The whole procedure was criticized by the Supreme Court itself and it is under attack by the Constitutional Court. A: I found the solution to this problem. It was a Google Webmaster Blogpost: You can read the entire blogpost here: Q: how to get value from 2 table simultaneously by using join in sqlite Table 1:categories id name 1 Android 2 IOS Table 2:subcategories id parent name 1 2 Android 2 1 IOS my sqlite query is as select c.name,sc.name from categories c,subcategories sc where c.id=sc.parent; I want the result as name name Android Android Android IOS IOS Android I want the result as two table columns. A: Just use LEFT JOIN. This will give you one record for each parent category. select c.name, sc.name from categories c LEFT JOIN subcategories sc ON c.id = sc.parent Q: How to avoid overriding of vtable I have the following class: class A { void func() {std::cout <<4bc0debe42
