Also known as Cloud Fixer, Adobe Create was released as a free download two years ago. Creates is an editor capable of working directly with RAW files, developed by the Creative Cloud team and Macromedia back before it was acquired by Adobe. This is a plug and play business tool that allows users to drag and drop their images into the application. Overall, it is a very simple editor in terms of user interface. Let's face it, we got used to it on desktop computers. It features several different Water Colors, Blur, Filters and Noise Reduction and sharpening tools that you can apply to your images. A nice feature is the ability to add special effects to your images such as Vignette, Cross-Processing, Glow and more. It has nothing unique to offer, that I have not seen in the other desktop editing software, but it is worth a trial. We test how all our editors and software can handle an entire RAW workflow, including support for all major RAW file structures and editing modes. Though, a good number of new features target specific prosumers, those who are looking for all-in-one photo editing software. I upgraded to Lightroom 6 to take advantage of its new features. I went from a free version, missing some of features, to a \$50.00 license. So for \$67.00 I can't really afford not to have a license. Make sure that you read all of the cautions before purchasing as there are quite a few issues with the software, and while the new features are great, not everything is 100% bug free yet. Once I got it, it worked great. No issues. However, if you pay for the new version of Lightroom right now, their support sucks. It's slow and doesn't have the answers to your questions. Their support and their website have changed so much that I'm constantly clicking around to figure out what to do without finding any answers. It's a huge disappointment.
